Design Justification

- Minimised clutter for increased accessibility and usability, following recommendations for WCAG 2.1 compatible layouts.
- Split-screen and large button designs ensure clear navigation and visibility for users with low vision or dexterity challenges.
- Consistent navigation bars and feedback screens maintain orientation and reduce cognitive load for all age groups.
- Instant feedback on quiz answers to reinforce learning, based on proven gamification and behavioural research.
- Accessible controls, such as password visibility toggles and "high contrast" options, included from day one.
- User progress reporting and dashboard structure designed to encourage regular training participation without overwhelming users.
- All critical functions are keyboard accessible and screen reader friendly by design.
